

## PROCESS INDUSTRIES

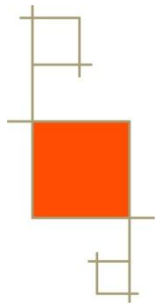

**Training  
Standards**

Supported by:

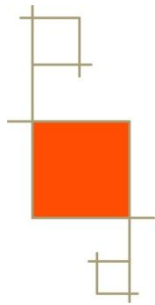

## **Training standards?**

- What are the Cogent SSC training standards
- Where do they fit in the overall scheme of qualifications and standards?
- Why have training standards?
- What are the benefits of training standards?

## Example – Process Safety Leadership

- Developed in response to a call for action from industry and the Health & Safety Executive
- Industry stakeholders and key employers committed to supporting the development
- Industry experts and training providers involved in defining the standards
- Designed to be deliverable and fit for purpose
- Targeting a specific need, with proactive marketing and sales
- Industry is getting what it asked for and understands what the training standard will deliver
- Commitment to training is very high
- Training is pitched at the right audience, sold at an acceptable price and delivered using quality assured providers
- Industry has TRUST in what is being delivered.

# Other examples of training standards developed to date

## Training Standards

You are viewing **Training Standards** for the **Chemicals** industry.

[Machinery safe-guarding](#)

---

## What is the opportunity

- Work with standards that industry has agreed
- Deliver commercial training that has the training standard benchmark
- Identify other areas to develop training standards where the network as a whole can benefit, to differentiate our offer from non-accredited providers
